

Deleting Files That Are In Quarantine for Mac OS X

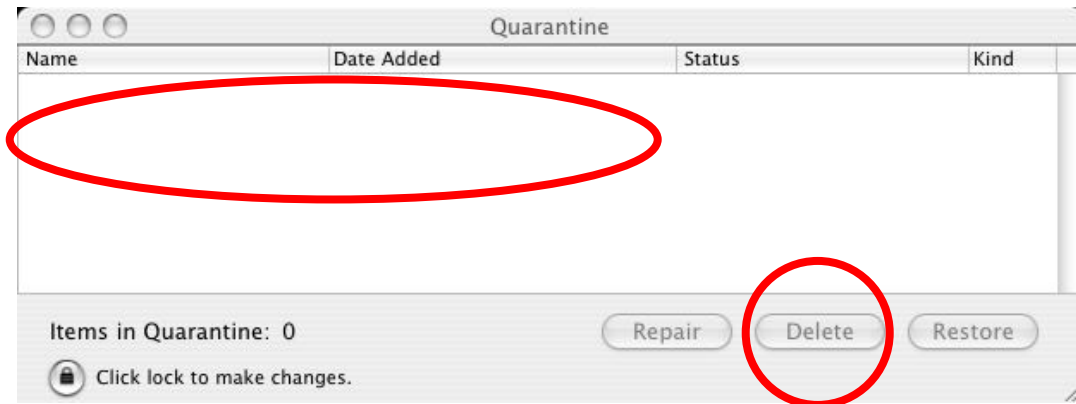

Depending on the NAV settings some files that are infected are sent to Quarantine. If you would like to clean out these files you will need to do the following:

Start by clicking on the gold/black mobius shield in the menu bar at the top right corner of the screen. The NAV window will then open up. . In the shortcut menu, choose "Norton Antivirus," then "Open Norton Antivirus." The Norton Antivirus window will then open.

Click the "Quarantine" tab at the left to open the Quarantine dialog box.

If there are any files that have been Quarantined then they will appear in this window. Just click on the file and click the "Delete" button to delete it.

(Note: Before you can proceed, you may have to check the lock in the bottom left corner of the window to see if it is unlocked. If not, then click it and type in your computer password when prompted.)

When finished, go to the Norton Antivirus menu in the menu bar and select Quit.
